

(Currently Amended) 1. A method for retrieving a map from an Internet web-site comprising:

- 5
- a) sending a telephone number for a destination location as a map request ~~with a telephone number~~ to said Internet web-site; and
  - b) receiving a map for said destination location from said Internet web site associated with said telephone number ~~sent with said map request~~.
- 10

(Currently Amended) 2. The method of claim 1 wherein:

15

said step a) of sending a map request with a said telephone number comprising a step of sending said telephone number as said map request to a map server for processing said map request with said telephone number for obtaining an address for said telephone number of said destination location.

AI

20 (Currently Amended) 3. The method of claim 2 wherein:

said step b) further comprising a step of retrieving a map of said destination location as identified by said address.

25 (Currently Amended) 4. The method of claim 1 wherein:

30

said step a) of sending a map request with a said telephone number comprising a step of sending said map request said telephone number from a mobile phone to a map server for processing said map request with said telephone number for obtaining an address for said destination location associated with said telephone number.

February 23, 2004

(Currently Amended) 5. The method of claim 4 wherein:

5                   said step a) of sending said telephone number as a map  
request from a mobile phone to a map server further  
comprising a step of pushing a map-retrieval key on said  
mobile phone for logging on to said map server.

(Currently Amended) 6. The method of claim 1 wherein:

10                   said step a) of sending said telephone number of a  
destination location as a map request ~~with a telephone~~  
~~number to~~ said Internet web-site further comprising a step  
of said Internet web site receiving and normalizing said  
15                   telephone number ~~sent with said map request~~ into a  
normalized telephone number.

AI  
(Currently Amended) 7. The method of claim 6 wherein:

20                   said step a) of sending said telephone number of a  
destination location as a map request with a telephone  
number to said Internet web-site further comprising a step  
of applying said normalized telephone number for searching  
an address listed for said normalized telephone number.

25                   (Currently Amended) 8. The method of claim 7 wherein:

30                   said step b) further comprising a step of retrieving a map of  
said destination location as identified by said address listed  
for said normalized telephone number.

February 23, 2004

(Currently Amended) 9. A method for retrieving a map from network server comprising:

- 5
- a) sending a numeric input data coded for a destination location as a map request ~~as a numeric input data~~ to said network server; and
- b) receiving a map of said destination location from said network server associated with said numeric data input sent with said map request.
- 10

(Currently Amended) 10. The method of claim 9 wherein:

15

said step a) of sending said numeric input data coded for a destination location as a map request ~~as a numeric input data~~ comprising a step of sending said map request to said network server with a partial telephone number of said destination location.

AI

(Currently Amended) 11. The method of claim 9 wherein:

20

said step a) of sending said numeric input data coded for a destination location as a map request ~~as numeric input data~~ comprising a step of sending said map request from a mobile phone to a network server for processing said numeric input data for obtaining a geographic position of said destination location associated with said numeric input data.

25

(Currently Amended) 12. An Internet system comprising:

5 an Internet web site linking to a map server for receiving a  
telephone number for a destination location as a map  
request ~~telephone number sent to said Internet web site~~; and

10 said Internet web site comprising a map request processor  
for enabling a database search for determining a geographic  
position of said destination location associated with said  
telephone number and retrieving a map for said ~~geographic~~  
destination location.

(Currently Amended) 13. The Internet system of claim 12 wherein:

15 said map request processor further comprising a database  
for associating said telephone number with a geographic  
position of said destination location and associating said  
geographic position of said destination location with a map.

20 (Currently Amended) 14. The Internet system of claim 12 wherein:

25 said map request processor further comprising a first  
database for associating said telephone number with a  
geographic position of said destination location and a  
second database for associating said geographic position of  
said destination location with a map.

(Currently Amended) 15. The Internet system of claim 12 wherein:

5                   said map request processor further comprising a telephone  
                  number normalization processor for normalizing said  
                  telephone number sent with said map request into a  
                  normalized telephone number for enabling said database  
                  search for retrieving a map for said destination location  
                  associated with said normalized telephone number.

10                  (Currently Amended) 16. The Internet system of claim 12 wherein:

                  said map request processor further comprising a map  
                  request handler for handing said map request submitted in  
                  different communication protocols ~~and hypertext transfer~~  
15                  ~~protocol (HTTP), simple mail transfer protocol (SMTP) and a~~  
                  ~~telephonic attendant processor as said map request.~~

AI  
(Currently Amended) 17. The Internet system of claim 16 wherein:

20                   said map request handler further comprising a partial  
                  telephone number handler for handing said map request  
                  submitted with partial telephone number for a destination  
                  location.

25

February 23, 2004

(Currently Amended) 18. The Internet system of claim 12 wherein:

5                   said map request processor further comprising an automatic  
Internet universal resource location (URL) linking processor  
for linking to several universal resource locations (URLs) for  
enabling a database search for determining a geographic  
position of said destination location associated with said  
telephone number and for retrieving a map for said position  
10                   of said destination geographic location.

(Currently Amended) 19. The Internet system of claim 12 further  
comprising:

15                   a telephone for sending said map request with a telephone  
number of said destination location to said map request  
processor.

AI  
(Currently Amended) 20. The Internet system of claim 19 wherein:

20                   said telephone is a wireless telephone for sending said  
telephone number of said destination location as said map  
request.

(Currently Amended) 21. A network system comprising:

25                   a map server for receiving a numeric data input coded for a  
destination location as a map request; and

30                   said map server further includes a database-search enabling  
means for enabling a database search for determining a  
geographic position of said destination location associated  
with said numeric input and a map associated with said  
geographic position of said destination location.

February 23, 2004

(Currently Amended) 22. A network system comprising:

a geocentric server for receiving a numeric data input coded for a destination location as a map request; and

5

said geocentric server further includes a database-search enabling means for enabling a geocentric database search for determining a geographic position of said destination location associated with said numeric input.

10

(Currently Amended) 23. The network system of claim 22 wherein:

said geocentric server further includes a geocentric filter means for applying said geographic position of said destination location associated with said numeric input to establish a geocentric filter for filtering a subsequent database search.

15

(Currently Amended) 24. The network system of claim 22 wherein:

20

said geocentric server is provided for receiving a numeric data input comprising at least a first part of a telephone number; and

25

said database-search enabling means is provided for enabling a geocentric database search for determining a geographic position of said destination location associated with said first part of said telephone number.

30

February 23, 2004

(Currently Amended) 25. The network system of claim 23 wherein:

AI  
5      said geocentric server further includes a normalization  
processor for normalizing said numeric data input into a  
normalized numeric data input.
